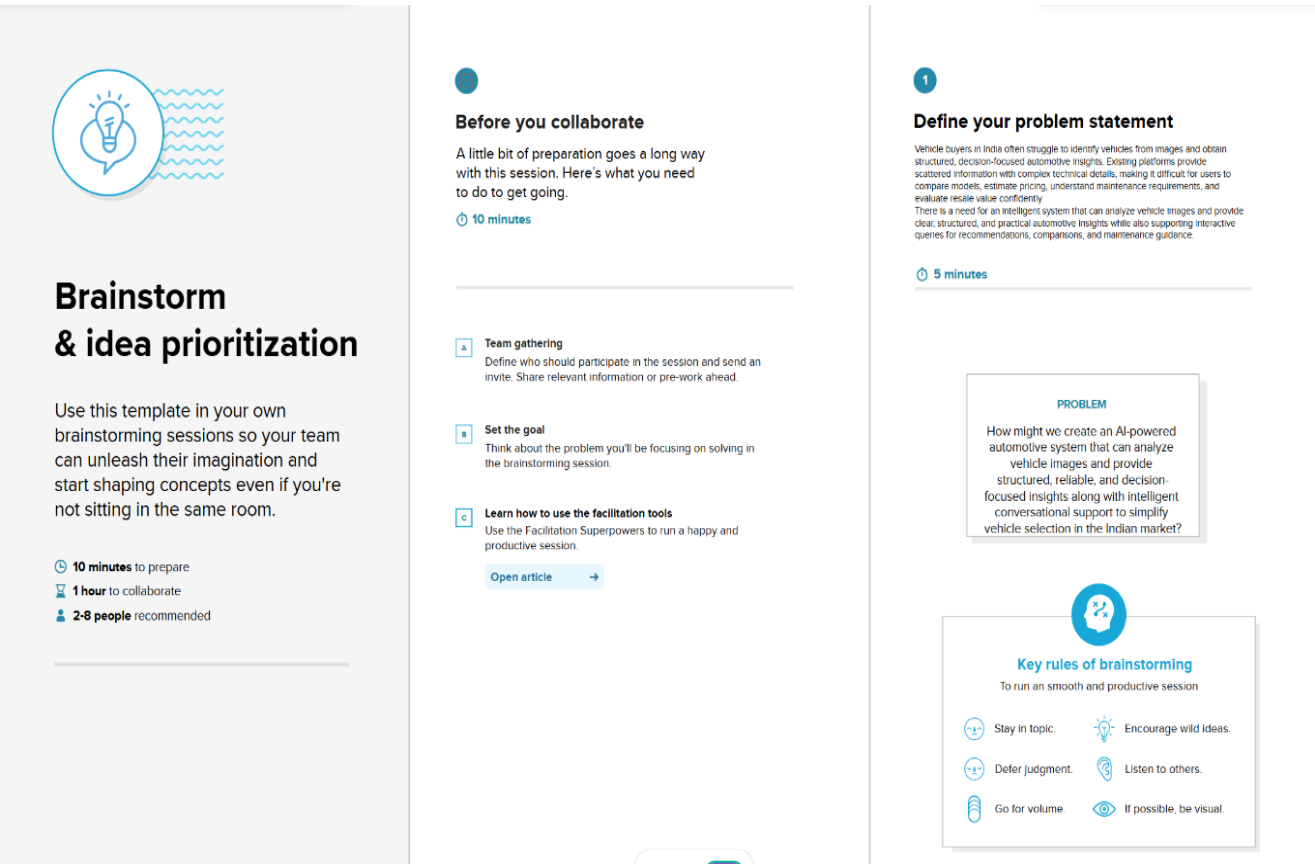
**Brainstorm & Idea Prioritization Template:**

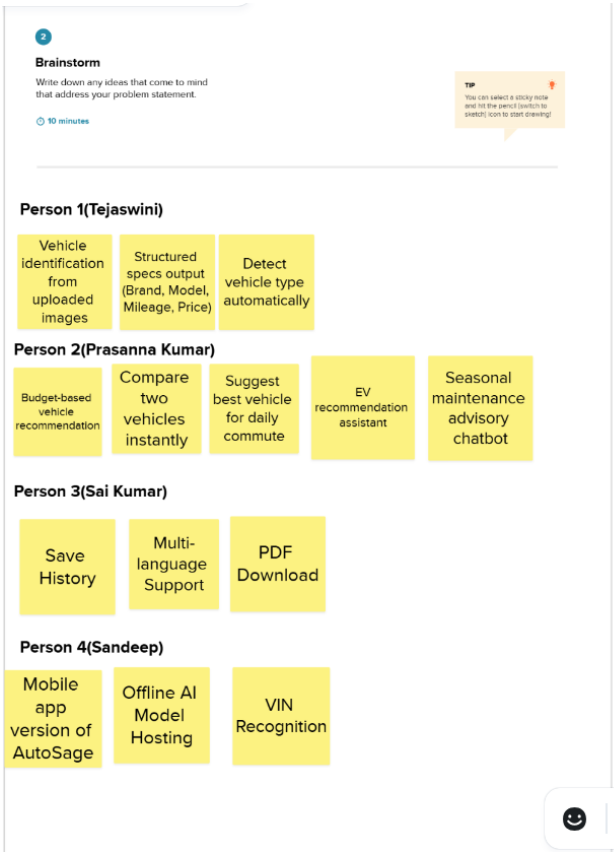
To solve the problem of unstructured and scattered automotive information, several practical ideas were generated. These included AI-based vehicle identification from images, structured vehicle reports with pricing and mileage details, budget-based recommendations, vehicle comparison features, and a conversational automotive assistant for maintenance and EV guidance.

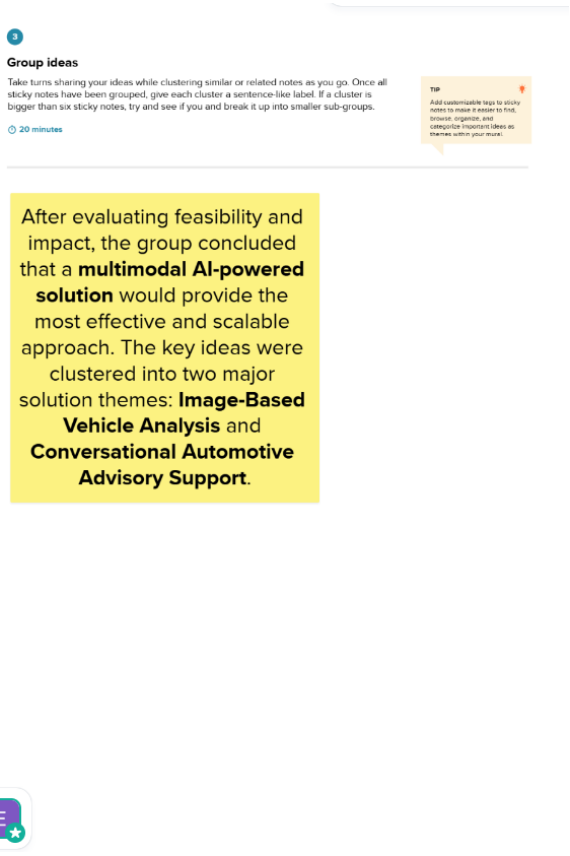
After evaluating feasibility and impact, the team decided to focus on image-based vehicle analysis and a structured AI-powered conversational assistant, as these features directly address user confusion and were achievable within the project scope.

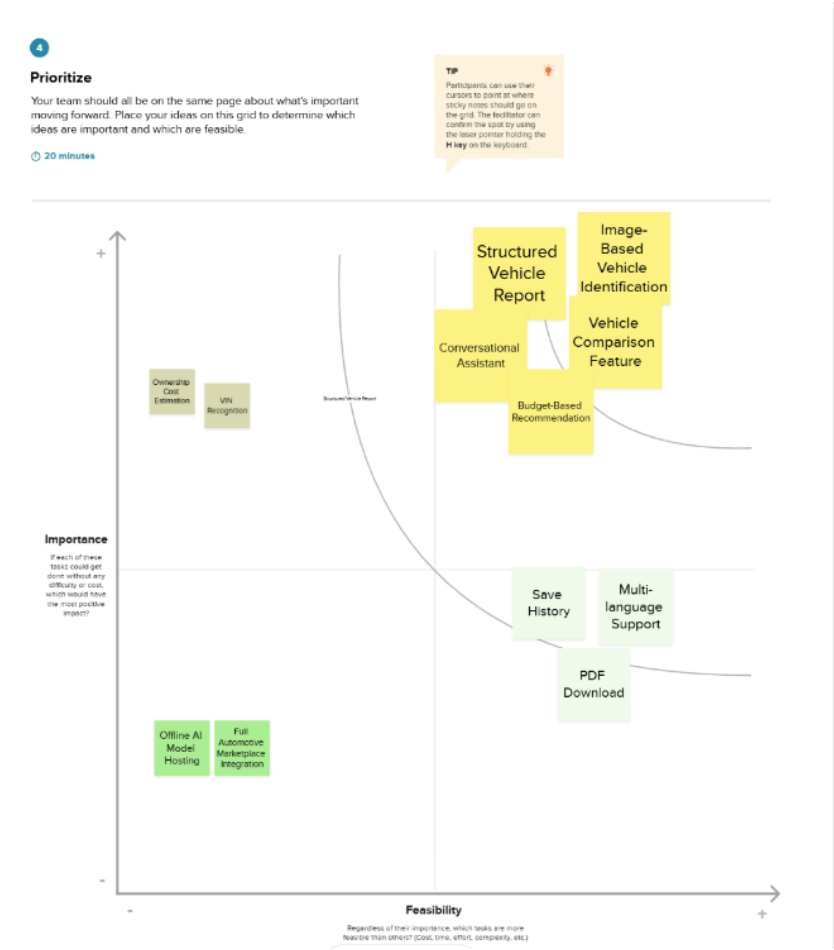
**Step-1: Team Gathering, Collaboration and Select the Problem Statement**

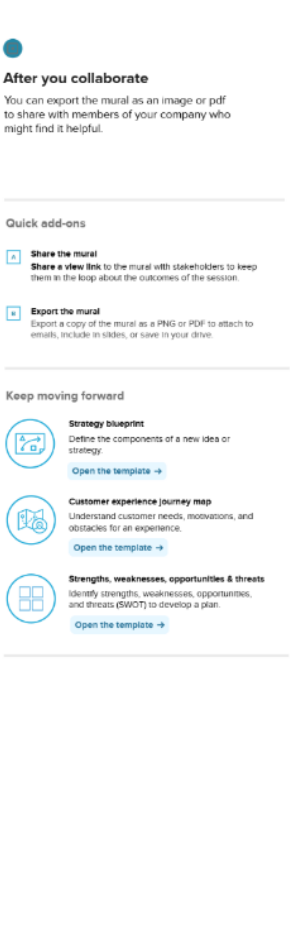


**Step-2: Brainstorm, Idea Listing and Grouping**









## Step-3: Idea Prioritization
