Define Problem Statements (Customer Problem Statement Template):

The Indian automobile market offers a vast range of two-wheelers and four-wheelers, making it difficult for buyers to identify the right vehicle that matches their budget, performance expectations, and long-term value. Vehicle information such as specifications, mileage, pricing, maintenance cost, safety features, and resale value is often scattered across multiple websites and presented in complex technical formats. Additionally, there is no intelligent system that can analyze vehicle images and instantly generate structured, decision-oriented insights. Buyers also lack an interactive advisory platform that can provide personalized recommendations, comparisons, maintenance guidance, and eco-friendly alternatives in a clear and organized manner. This leads to confusion, time consumption, and uncertainty in decision-making. Therefore, there is a need for a unified, AI-powered automotive intelligence system that integrates image-based vehicle analysis with conversational advisory capabilities to deliver structured, reliable, and market-relevant insights in one place.
