Empathy Map Canvas:

To better understand the needs and challenges of users impacted by the AutoSage system, an empathy analysis was conducted focusing on vehicle buyers in the Indian automobile market. The primary users include first-time buyers, middle-class families, working professionals, automobile enthusiasts, and eco-conscious individuals exploring electric or hybrid vehicles. These users aim to make informed purchasing decisions based on budget, mileage, maintenance cost, resale value, and long-term reliability.

From an emotional perspective, users often feel confused and overwhelmed due to the large number of vehicle options available. They worry about making costly mistakes, hidden ownership expenses, low resale value, and misleading marketing claims. They are exposed to scattered information across multiple websites, conflicting YouTube reviews, dealer promotions, and opinions from friends and family. While they desire clear comparisons and structured insights, they frequently encounter technical jargon and inconsistent data, which increases uncertainty.

Users typically search online, compare specifications across platforms, visit showrooms, and seek advice from peers before finalizing a decision. They express concerns such as “Which vehicle fits my budget?”, “Is this car fuel-efficient?”, and “Will this vehicle have good resale value?” Ultimately, they seek confidence, clarity, and reliable guidance throughout their decision-making journey.

The empathy analysis highlights the need for a unified, intelligent automotive advisory system that simplifies complex vehicle information, provides structured insights, and supports confident decision-making. AutoSage addresses these emotional and functional needs by integrating image-based vehicle analysis with conversational AI-driven advisory capabilities.

Develop shared understanding and empathy

Vehicle buyers are overwhelmed by scattered and technical automotive information and seek a reliable, structured, and intelligent system that simplifies decision-making while providing confidence and clarity. AutoSage addresses these emotional and functional needs by combining image-based vehicle identification with conversational AI-driven advisory support.
